

Supplementary Figure S1. Changes in the Spd/Put ratios of control and irradiated ECs at stages I – V of maturation, determined on the 7th day after UV-B irradiation. Data indicate mean \pm SE ($n \geq 4$). Asterisks above bars indicate significant differences ($P < 0.05$) between the values observed in irradiated somatic embryos and the corresponding controls. 0 W m⁻² h⁻¹, control—untreated EC at stages I – V
